### Search Notes

Examiner Thompson:

Please find attached the result set of the search you requested. There are 39 hits derived from structures limited with utility-text. Please let me know if you have any questions.

Thanks.

# EIC1700

## Search Results

### Feedback Form (Optional)

Scientific & Technical Information Center

The search results generated for your recent request are attached. If you have any questions or comments (compliments or complaints) about the scope or the results of the search, please contact *the EIC searcher* who conducted the search *or contact*:

Kathleen Fuller, Team Leader, 308-4290, CP3/4 3D62

---

### Voluntary Results Feedback Form

➤ I am an examiner in Workgroup:

Example:

➤ Relevant prior art found, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature  
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art not found:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Search results were not useful in determining patentability or understanding the invention.

Other Comments:

---

Drop off completed forms in CP3/4 - 3D62 .

## Search Results Feedback Form

The search results generated for your recent request are attached. If you have any questions or comments (compliments or complaints) about the scope or the results of the search, please contact the searcher whose name is circled below.

Kathleen Fuller 308-4290

John Calve 308-4139

Barba Koroma 305-3542

Eric Linnell 308-4143

All searchers are located in the library in CP3/4 3D62

## SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: Conie S. Thompson Examiner #: 79244 Date: 6/12/03  
Art Unit: 1774 Phone Number 30 54988 Serial Number: 600 10/060203  
Mail Box and Bldg/Room Location: 03-11B28 Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

\*\*\*\*\*  
Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations; authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Organic electroluminescent materials

Inventors (please provide full names): Shinji Matsuo; Kazuo Ishii; Hiroshi Miyazaki; Toshinao Yuki; Hitoshi Nakada; Ryuji Murayama; Yashuhiko Sawada; Tsuyoshi Nagai; Yoshihiro Fukuda  
Earliest Priority Filing Date: February 8, 2001

\*For Sequence Searches Only\* Please include all pertinent information (parent, child, divisional; or issued patent numbers) along with the appropriate serial number.

Please do a search + CAS search on Claims 1-7

Shinji

Please see attached ①

AB The effect of annealing of org. thin films on charge injection in the tris(8-quinolinolato)aluminum (Alq3)-based org. electroluminescent (EL) devices was investigated. The external quantum and luminous efficiencies were found to improve by annealing. The investigation of the effect of annealing on charge injection in hole-only and electron-only devices has revealed that while hole injection from the ITO electrode into the hole-transport layer is not affected by the annealing, electron injection from the MgAg electrode into the Alq3 layer is enhanced by the annealing. It is concluded that improved charge balance due to the enhanced electron injection by the annealing is responsible for the improvement of the performance of the org. EL device.

AB The invention refers to an electroluminescent device comprising an amine compd. with at least two rings and the compd.  
Ar(Ar11Ar12) (Ar21Ar22) (Ar31Ar32) [Ar = aryl or heteroaryl; Ar11,21,31 = arylene; Ar12,22,32 = H or substituent; where at least one of Ar11-32 is a condensed ring aryl or heteroaryl] in the luminescent layer.

AB Org. electroluminescent materials are described which comprise a tertiary arylamine contg. 2 to 4-N atoms each forming a triarylamine, characterized in that the org. electroluminescent material comprises .ltoreq.1 wt.% of impurity compds. possessing one less N atom forming a triarylamine group than the tertiary arylamine compd. and/or .ltoreq.2 wt.% or less of impurity compds. possessing one more N atom forming a triarylamine group than the tertiary arylamine compd. Org. electroluminescent devices employing the org. electroluminescent materials are also described. A process for prepg. the org. electroluminescent materials is disclosed which entails purifying by sublimation or distn. the tertiary arylamine obtained by the reaction of a haloaryl compd. contg. .gtoreq.1 halogen atoms in the arom. ring with an arylamine in the presence of a catalyst until the tertiary arylamine contains .ltoreq.1 wt% compds. possessing one less N atom forming a triarylamino group than the tertiary arylamine compd. or .ltoreq.2 wt% compds. possessing one more N atom forming a diarylamino group than the tertiary arylamino compd.

AB The prepn., structural characterization, and photophys. characterization  
 of diphenylaminofluorenyl polymer as well as 9,9-didecyl-2,7-  
 bis[phenyl(9,9-didecyl-2-(N,N-diphenylamino)fluorenyl)amino]fluorene model  
 compd. produced via Ullmann condensation were described. The high  
 two-photon absorptivity, luminescence fluorescence properties, and high  
 soly. made these compds. good candidates for two-photon based  
 applications.

AB The new amine compd. is represented by a general formula I (Ar1-7 = aryl; R1, R2 = H, alkyl, aryl, aralkyl; Z1, Z2 = H, halo, alkyl, alkoxy, aryl; X1-3 = arylene; 1, m = 0, 1) and synthesized. The amine compd. is

suitable as a pos. hole injection transport material in an org. electroluminescent display device.

AB The device comprises a substrate, a transparent electrode, a  
 hole-transport layer contg. 4,4',4"-tris[biphenyl-2-  
 yl(phenyl)amino]triphenylamine and/or 4,4',4"-tris[biphenyl-4-yl(3-  
 methylphenyl)amino]triphenylamine, a light-emitting layer, and a backing  
 electrode laminated in the order. The device may also contain a 2nd

hole-transport layer contg. N,N'-di(biphenyl-4-yl)-N,N'-diphenyl-(1,1'-biphenyl)-4,4'-diamine. The light-emitting layer may comprise tris(8-quinolinolato)aluminum. The compds. specified above and their use as hole transporters are also claimed. The devices are esp. suitable for use in full color flat panel displays.

AB The monodomain-alignment of new photocrosslinkable fluorene bisacrylate  
model compds. and oligomers is reported. The orientation of the nematic  
LC- phase is preserved by photopolymn. in an oriented LC- network.  
Monodomain orientations of crosslinked fluorene bisacrylates were studied  
by UV-visible and photoluminescence spectroscopy comparing different  
alignment layers. OLEDs were fabricated using oriented fluorene  
bisacrylates and polyfluorenes leading to state-of-the-art polarization  
ratios for electroluminescence of up to 25 and brightnesses of .apprx.250  
Cd/m2.

GI

AB The title aryl amine has structure I ( Ar1 = heterocyclics; R1-16 = H, amino, alkyl, alkoxy, aryl; Ar2-5 = aryl) and .gtoreq.750 mol. wt. The aryl amine has a relatively large mol. wt. and provides the EL device of the excellence in the luminescent efficiency, coatability, durability, and storageability.

AB The title compds. [I; Ar1 - Ar6 = (un)substituted aryl; NAr1Ar2, NAr3Ar4, or NAr5Ar6 forms N-contg. heterocyclyl; R1, R2 = H, linear or branched alkyl, (un)substituted aryl or aralkyl; Z1, Z2 = H, halo, linear or branched alkyl or alkoxy, (un)substituted aryl; X1, X2 = (un)substituted arylene] are prepd. Thus, 2-[N,N-bis(4-methylphenyl)amino]-9,9-dimethyl-9H-7-iodofluorene 10.3, N,N-bis[4-(diphenylamino)phenyl]amine 10, Cu

powder 10, and K<sub>2</sub>CO<sub>3</sub> 20 g were refluxed in o-dichlorobenzene at 190.degree. for 8 h to give 2-[bis(4-methylphenyl)amino]-9,9-dimethyl-7-[bis(4-(diphenylamino)phenyl)amino]fluorene (II) which was purified by sublimation at 350.degree. and 10-6 torr. An org. electroluminescent device with a hole transport layer of II, an electron transport layer of aluminum tris(8-quinolinolate), and a Ag/Mg cathode electrode vapor-deposited on an ITO transparent substrate exhibited green luminescence with brilliance of 580 cd/cm<sup>2</sup> at 50.degree., 6.5 V, and 10 mA/cm<sup>2</sup>.

AB The fluorene derivs. are represented by I [A1-5 = aryl; R1, R2 = H, alkyl, aryl, aralkyl; Z1, Z2 = H, halo, alkyl (oxy), aryl; X = arylene]. Org. electroluminescent devices using I showed good stability and durability.

AB The invention relates to an org. electroluminescent device having org. compd. layers which include an org. luminescent layer interposed between a pair of electrodes and at least one of which is made of an org. compd. material contg. <1000 ppm of impurities. The device is light wt. and flat and is applicable to a display of low-voltage drive type. The luminance does not deteriorate even after a long-term drive, and is excellent in durability.

AB The thermal stability of newly synthesized hole-transporting polyimide, poly[N,N'-diphenyl-N,N'-bis(4-aminobiphenyl)-(1,1'-biphenyl)-4,4'-diamine pyromellitimide] (PMDA-DBABBD PI), via vapor deposition polymn. was studied with the aid of the capacitance-temp. (C-T) measurement technique. Prior to the examn. of the complete org. electroluminescent device (OELD), the single layer devices with the individual materials including tris(8-hydroxyquinolinato) Al (Alq3), N,N'-diphenyl-N,N'-bis(3-methylphenyl)-(1,1'-biphenyl)-4,4'-diamine (TPD), N,N'-diphenyl-N,N'-bis(1-naphthyl)-(1,1'-biphenyl)-4,4'-diamine (NPB), Cu phthalocyanine (CuPc), and PMDA-DBABBD PI were subjected to the C-T measurement. The relaxation temps. of the single layer devices with Alq3, TPD, NPB, CuPc, and PMDA-DBABBD PI were 180, 76, 110, 125, and >200.degree., resp. The OELD with PMDA-DBABBD PI and Alq3 as a hole-transporting layer and emissive layer was not relaxed up to 150.degree., while those contg. CuPc/TPD and NPB thin films were catastrophically damaged at .apprx.76 and 110.degree., resp. The OELD with the small org. hole-transporting mol. has almost the same relaxation temp. as the single layer device with the resp. mols. The rectifying and electroluminescent characteristics disappeared for the annealed OELD with the small org. hole-transporting mols., whereas the OELD with the hole-transporting polyimide did still show the rectifying behavior with the green light emission even though the c.d. and the light intensity became largely reduced.

AB Title compds. (p-X1X2NC6H4)3N (I; X1 = C6H4R; X2 = C6H4R'; R, R' = H, alkyl), useful as hole-transporting materials for electroluminescent devices (no data), are prepd. by reaction of I (X1 = X2 = H) (II) with (alkyl)cyclohexanones in the presence of H transfer catalysts and successive reaction of I (X1 = C6H4R; X2 = H) with (alkyl)cyclohexanones. II was treated with cyclohexanone in PhOH in the presence of Pd/C at 175.degree. for 15 h to give 89% I (X1 = Ph, X2 = H), which was treated with 3-methylcyclohexanone in m-cresol in the presence of Pd/C and isophthalic acid at 175.degree. for 20 h to give 70% I (X1 = Ph, X2 = C6H4Me-3).

AB Compds. suitable for use in electroluminescent devices are described by such general formula as I (A= Q, Q1, Q2; Ar1-6 = independently selected (un)substituted aryl groups; X1-6 = independently selected O, S, C=O, SO2, Si(B1)B2, N(B1), PB1, P(:O)B1-, -(CH2)x-O-(CH2)y-, (un)substituted alkylene groups, or (un)substituted alicyclic moieties; B1 and B2 = independently selected (un)substituted alkyl group or a (un)substituted aryl group), etc. The materials may be hole-injecting materials. Devices using the materials, including display devices, are also described, as is the use of the materials in the devices.

AB In the devices, the 1st luminescent devices wherein red- and green-emitting elements are sep. arranged and the 2nd luminescent devices contg. blue-emitting elements are laminated so that the planes mounting the emitting elements are faced each other. The red- and green-emitting elements are in inorg. layers and the blue-emitting elements are in org. layers, where the inorg. and org. layers are retained by pair of electrodes. The devices may involve blue (or red) color filters on the emission sides of the 1st (or the 2nd) luminescent devices.

AB For the purpose of developing an amorphous mol. material with a high glass transition temp. (Tg) and a low ionization potential for use as a charge-transport layer in org. electroluminescent (EL) devices, a novel starburst mol., 4,4',4''-tris[bis(4'-tert-butylbiphenyl-4-yl)amino]triphenylamine (t-Bu-TBATA), was designed and synthesized. T-Bu-TBATA was found to form readily a stable glass with a Tg of 203.degree.. A multilayer EL device consisting of double hole transport layers of t-Bu-TBATA and 4,4',4''-tri(N-carbazolyl)triphenylamine and an emitting layer of tris(8-quinolinolato) Al was fabricated and its performances were examd. The device was found to exhibit good performances and to be thermally stable, operating even at 170.degree..

AB The polyarylpolyamines are prepd. by the reaction of .gtoreq.1 tertiary di- or polyarylamine having 2 halogen substituents with a haloarom. compd. having a crosslinkable reactive group or trialkylsiloxy moiety. Films of the title compds., as well as films of polymers of their crosslinkable species, are efficient in the transport of pos. charges when exposed to relatively low voltage levels, and demonstrate solvent and heat resistance.

GI

AB Novel trisarylamino benzene derivs. are represented by the formula I [Z1, Z2, and Z3 = divalent arom. ring residues, R11, R21, and R31 = groups represented by -NZ1Z2, -NHZ1, -NR1Z1, -Z1, -OZ1 or -SZ1 wherein each of Z1 and Z2 = a monovalent arom. ring residue, and R1 is an alkyl group, .gtoreq.1 of R11, R21, and R31 being a group represented by -NZ1Z2, -NHZ1 or -NR1Z1, and A12, A22, and A32 = arom. residues, alkyl groups or H]. An org. electroluminescent element which uses the compd. in an org. compd. layer, esp. in a hole injection transport layer provides uniform plane light emission and is durable enough to maintain luminance.
